PHYSICIAN NOTES & PLAN

Patient's glycemic control has worsened since the last visit. The bilateral tingling in the lower extremities is highly suggestive of early diabetic peripheral neuropathy.

1. Prescribed Gabapentin 300 mg once daily at night for nerve pain.
2. Increased Metformin dosage is not recommended at this time; instead, advised strict dietary modifications (low carbohydrate diet) and 30 minutes of daily aerobic exercise.
3. Ordered a comprehensive diabetic foot exam.
4. Follow-up scheduled in 4 weeks to recheck fasting glucose levels.
